Have searched the Web to try and find out, but found nothing that works. Please help! A: On Mac OS X, the build for the system has changed over to clang (Apple's version of gcc). But, prior to this, the build for Apple systems was the Xcode build of gcc, so you're running 32bit programs on a 64bit OS. Both Exterminate It! 2.12 and Exterminate It! 2.12.06.18 require clang (which we know is 32bit). Since the gcc version on the system is prior to the release of Exterminate It! 2.12.06.18, the build will fail and return an error. If you download the latest version of Exterminate It! from the site, you will need to download a .dmg file, open that, and then drag the dmg file to your Applications folder. Then, you'll have to restart the app to have it load the extermiate it.app file and not the extermiate it.app.pkg file. To be frank, this is all guesswork on my part because I don't actually run Mac OS X. Effects of workplace factors on
